Test Execution Plan

[Functional Testing, Regression Testing, Integration Testing, Compatibility Testing, Load Testing, Performance Testing, Regression Testing, etc]

Test Type	Description
Regression Test	Testing with the intent of determining if bug fixes have been successful and have not created any new problems. Also, this type of testing is done to ensure that no degradation of baseline functionality has occurred
Unit Test	Unit tests ensure that each unique path of the project performs accurately to the documented specifications and contains clearly defined inputs and expected results
System Test	System testing ensures that the entire integrated software system meets requirements. It tests a configuration to ensure known and predictable results. System testing is based on process descriptions and flows, emphasizing predriven process links and integration points
Integration Test	Testing two or more modules or functions together with the intent of finding interface defects between the modules or functions
Functional Test	Functional test can be defined as testing two or more modules together with the intent of finding defects, demonstrating that defects are not present, verifying that the module performs its intended functions as stated in the specification and establishing confidence that a program does what it is supposed to do
Performance Test	Testing with the intent of determining how quickly a product handles a variety of events. Automated test tools geared specifically to test and fine-tune performance are used most often for this type of testing
Compatibility Test	Testing used to determine whether other system software components such as browsers, utilities, and competing software will conflict with the software being tested.
Load Test	Testing with the intent of determining how well the product handles competition for system resources. The competition may come in the form of network traffic, CPU utilization or memory allocation
Stress Test	Testing with the intent of determining how well a product performs when a load is placed on the system resources that nears and then exceeds capacity
